1950 TASKS OF USSR TECHNICAL  
 ADMINISTRATION FOR CONSTRUCTION AND INSTALLATION

I. I. Kondalov, Chief Eng  
 Tech Adm for Constr and Installation

Considering the creation of such trusts as Khramgesstroy and Chirchikstroy examples of efficient administrative operation the Technical Administration for Construction and Installation proposes converting Dneprostroy into a territorial trust for the southwestern USSR

In anticipation of a considerable increase in the volume of earth-moving and concrete construction work in the immediate future (50-60 million cubic meters of earth and up to 2 million cubic meters of concrete), the administration proposes the greatest possible promotion of mechanization in construction work. The necessity of using large concrete mixers with a capacity of 2,200 liters or more is emphasized. The mixers now in use have a capacity of only 425-1,200 liters.

The Technical Administration is an organization created by the Ministry of Electric Power Stations for the purpose of accelerating the construction of electric power stations and transmission lines, and for giving technical assistance by consultation and the development of new standards for construction equipment and materials. It also handles the general supervision and coordination of scientific research activity in all institutes and planning organizations of the ministry. Dissemination of technical information and the publication of technical literature are also functions of this new organization.
